1. Songs Database

The song database is the database of song lyrics the app uses for displaying. You can access the song database by clicking the LyricsPro logo, and selecting "Songs" from the menu. Be sure that if the songs you use require CCLI licensing, that you obtain the proper license.

1.1 Creating and editing a song

Once in the Song Database, to add a song, click "Add New Song" at the top of the song list. Here you can enter a title, author, and lyrics. Each slide is automatically separated by leaving a blank line (without spaces) between the words.

To edit a song already made, select it from the list of songs in the Song Database. The song will open, and you are free to edit.

Make sure to click save after creating a new song OR editing a song.

1.2 Importing a song

Using azlyrics.com, you can import songs easily. Find your song on azlyrics.com, and copy the URL. A URL looks like "http://www.azlyrics.com/....", and should be located at the top of your webpage.

Once copied, go into LyricsPro, and go into the Songs Database. Click "Add New Song", and in the top right hand corner, click import. Paste your URL, and click import. Wait 10 seconds, and the song will automatically load in as a new song. Edit the text if it requires editing, and click save.

1.3 Removing a song

Once in the Songs Database, press and hold any song in the list of songs, and the option to delete the song will pop up.

1.4 CCLI Licensing

Clicking on the Text Settings will bring up the CCLI licensing input.

2. Schedule

The Schedule is the list of items (including songs, videos, images, and PowerPoints) that you plan to use in the current activity. It is located on your main screen.

2.1 Adding Songs

On your main screen, beside the word "Schedule", press the plus sign. Select "Add Song", and choose your song.

2.2 Adding Media

On your main screen, beside the word "Schedule", press the plus sign. Select "Add Media". Press Gallery in the list of options. If the list of options does not appear, click the title of the screen to go back, then click Gallery. Select your media. Currently supported video types are mp4, mkv, mpg, avi, m4v, mov, 3gp, and webm. If your video does not display, go to the troubleshooting section of this document.

Do not add media items during a presentation. Due to Android restrictions, the Media Selector will display on all screens.

2.3 Adding PowerPoints

On your main screen, beside the word "Schedule", press the plus sign. Select "Add PowerPoint". Do not add PowerPoint items during a presentation. Due to Android restrictions, the File Selector will display on all screens.

2.4 Sorting and removing items

To move an item up or down, or remove it from the schedule, press and hold the item. You will be able to do any of those three options from here. Removing a song from the schedule does not remove it from the Songs Database.

2.5 Importing and Exporting Schedules

To import or export a schedule, click on the word Schedule on the main screen. This only imports and exports songs, not any other files.

3. Output

3.1 Adding your display

To plug in your display, you need one of two things:

1. A Chromecast Device, or
2. An Android device with MHL capabilities. (SlimPort is needed for some devices)

For **MHL**, plug in your device, then open LyricsPro.

For **Chromecast**, once your Chromecast and Android device are paired, go into your device's display settings, click "Cast Screen", and select your Chromecast device. Then open LyricsPro.

3.2 Formatting Text

From the main screen, click Settings, then click Text. Here you can edit the text settings and whether or not the text fades between slides.

3.3 Formatting Backgrounds

From the main screen, click Settings, then click Background. Here, you can choose a video, picture, or color as your background.

Do not select a new photo or video during a presentation. Due to Android restrictions, the File Selector will display on all screens.

3.4 Clearing the output

There are two options for clearing the output:

1. Click Clear. This will remove all of the foreground items from the screen.
2. Click Blackout. This will remove everything from the screen, and blacken it.

To display content again, click on some content to display.

4. Troubleshooting

4.1 Restoring LyricsPro without losing data

If the application won't open, try going into your file system (we recommend ES File Explorer). Go to your SD card, then to LyricsPro. Delete settings.txt. Try reopening the application.

4.2 Wiping your Database

If the application won't open after trying 4.1, OR you simply want to start over, try going into your file system (we recommend ES File Explorer). Go to your SD card. Delete the LyricsPro folder.

4.3 Video Support

Currently, LyricsPro supports mp4, mkv, mpg, avi, m4v, mov, 3gp, and webm. If these file types do not play, download MX Player and MX Player codecs.
